

Database Platform Comparison

Project: Official Website – Regul Softech Solution Private Limited

Project Requirements

The website requires a secure and scalable database for Contact Forms, Career Portal (Resume Upload), Admin Dashboard, Future Blog, Product Showcase, UserAuthentication, and future expansion.

1. MongoDB Atlas (NoSQL)

Monthly Pricing: Approximately US\$9/month (starting paid plan).

Annual Pricing: Approximately US\$108/year.

Free Tier: 512 MB cloud storage.

Features: Flexible document database, JSON-based storage, cloud hosting, automatic scaling, easy integration with Node.js and Express.js, official MongoDB support.

Benefits: Fast development, ideal for MERN stack, easy schema updates, lower learning curve, excellent for startup websites and modern web applications.

2. Supabase (PostgreSQL)

Monthly Pricing: Approximately US\$25/month (starting paid plan).

Annual Pricing: Approximately US\$300/year.

Free Tier: Available.

Features: PostgreSQL database, Authentication, File Storage, Realtime APIs, Dashboard.

Benefits: Complete backend platform, excellent for SaaS applications and enterprise software, strong relational database support.

3. Neon PostgreSQL

Monthly Pricing: Approximately US\$19/month.

Annual Pricing: Approximately US\$228/year.

Free Tier: Available.

Features: Serverless PostgreSQL, automatic scaling, branching, modern cloud architecture.

Benefits: High performance, low maintenance, excellent production database.

4. Firebase Firestore

Pricing: Free quota available, then pay-as-you-go.

Features: Realtime synchronization, offline support, Google Cloud integration.

Benefits: Excellent for realtime mobile and chat applications.

5. MySQL (Cloud Hosted)

Pricing: Depends on hosting provider.

Features: Relational database, SQL support, reliable ecosystem.

Benefits: Stable, widely adopted, suitable for traditional business applications.

Recommendation Based on Current Project

Recommended Platform: **MongoDB Atlas**

Reason: The current website is being developed using the MERN stack (MongoDB, Express.js, React, Node.js). MongoDB Atlas provides seamless integration, reduces development time, offers a sufficient free tier, and supports the current requirements including Contact Forms, Career Portal, Admin Dashboard, Blog, and Product Showcase. It also provides an easy upgrade path as the company grows.

Future Recommendation

If the company expands into enterprise products such as ERP, CRM, HRMS, Inventory Management, or Billing Systems, PostgreSQL (Supabase or Neon) should be evaluated due to its excellent relational data capabilities and advanced reporting features.
